

ASTRO Anchor

THE ULTIMATE PILING ANCHOR

Protect Your Dock From Piling Lift During Storm Surge

ASTRO Anchor Piling Anchor System is used to create a series of rings around the base of each piling prior to sinking below the sea floor. Once installed and the piling is "sunk" this anchor system helps to resist piling lift.

- Piling Anchoring System to Combat Piling Lift During Storm Surge
- Easy Installation With Stainless Steel Screws or Stainless Steel Roofing Nails

- Apply Two or More Wraps per Piling for Increased Resistance
- Product Is Coiled for Ease of Use With Minimal Waste

ASTRO Anchor

INSTALLATION GUIDE

INSTALLATION INSTRUCTIONS — INSTRUCCIÓN DE INSTALACIÓN

- 1** Measure around the piling where the anchor will be attached. Take that measurement and add 3 inches to allow for overlap and cut this length of Astro Anchor from the coil.

Mida alrededor del montante donde se adjuntará el anclaje. Tome esa medida y añada 3 pulgadas para permitir la traslapación y corte esta longitud de Astro Anchor de la bobina.

- 2** Attach the beginning of each anchor strip to the piling with a pair of roofing nails (1 each, top and bottom).

Coloque el principio de cada tira de anclaje en el apilamiento con un par de clavos para techos (1 pieza, arriba y abajo).

- 3** Wrap the anchor strip completely around the piling over-lapping to just beyond the first two fasteners and add 2 more roofing nails to secure the ring tightly to the piling.

Envuelva la tira de anclaje completamente alrededor del apilamiento traspasando los dos primeros clavos y añada 2 clavos más para asegurar el anillo al apilamiento.

- 4** Reinforce the ring with more fasteners approximately every 3 inches (top and bottom) all the way around the piling.

Refuerce el anillo con más sujetadores aproximadamente cada 3 pulgadas (arriba y abajo) a lo largo de todo el apilamiento.

- 5** Repeat these steps to create as many anchor rings as desired.
Repita estos pasos para crear tantos anillos de anclaje como desee.
